

FLEXIBLE INTEGRATION WITH VITANI INTEGRATIONMANAGER

INTEGRATION MODULE TO NEDAP AEOS ENTERPRISE

A MODULE THAT MAKES INTEGRATION EASY AND FLEXIBLE

Vitani IntegrationManager can be used as a link between Nedap AEOS and other different systems, typically HR systems where the module easily can import data from a customers existing systems and integrate the selected data with Nedap AEOS.

The Vitani IntegrationManager module makes integration and synchronization between Nedap AEOS and other systems like HR systems easy and flexible. With a Vitani IntegrationManager solution import of person and or cardholder data into Nedap AEOS can be configured to use different data sources.

The IntegrationManager module can be used for a one-time-only transfer or the module can be setup to continuously import data according to defined schedules. Using an advanced scripting functionality it is possible to extend the module and hereby fulfill 100% customer specific functionality and as a result of this an optimal integration and administration of a customers data is obtained at the same time.

EXTEND THE FUNCTIONALITY WITH INTEGRATIONMANAGER

The Vitani IntegrationManager is running as a Windows Service and all a customer needs to use is a normal webbrowser to manage this solution. Import person and or cardholder data (person, authorizations, templates and badges) through multiple data sources that can be set up using:

*Microsoft SQL Server
ODBC, OLEDB
XML
LDAP (Active Directory)*

*Oracle DB, Progress DB
Textfiles (CSV)
SAP IDoc*

Multiple import configurations can be defiend. When defining an import configuration it is possible to use the differnent built-in browsers for selecting fields from databases, LDAP etc. which makes it possible to set up import only to do configuration and not programming. Advanced import schedules can be setup for periodically job execution using either a calendar or intervals.

SIMPLE AND CUSTOMIZED DATA COLLECTION

Data collected from data sources can be pre-processed and filtered to select specific records of the source data before being mapped into Nedap AEOS. Using built-in scripting languages like Roslyn, Java, JavaScript etc. data can be customized and manipulated before being imported to Nedap AEOS. Data can also be transformed using built-in functions like Constant, CopyAsDatetime, DirectCopy, IfElse, JavaScript, Left, Map, Mid, Right, Roslyn, SimpleJoin, SplitFirst, SplitLast

✓ WHAT ARE YOUR BENEFITS?

- Integration module to Nedap AEOS Enterprise.
- Import person/cardholder data (person, authorization, badges)
- Import from different databases, LDAP, XML, text files, HR-systems.
- Easy setup and configuration for customer specific projects.

✓ LANGUAGE

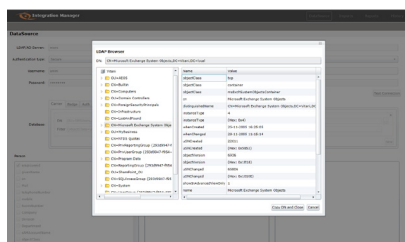

- IntegrationManager is available in english.
- GUI can be local language.
- Translation by project request.

✓ SYSTEM REQUIREMENTS

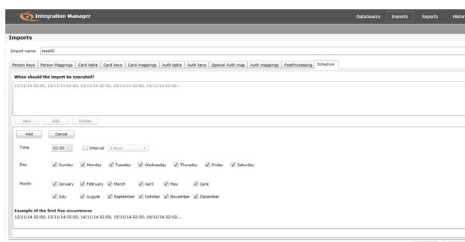

- **AEOS Enterprise with Microsoft SQL Server**
- Windows Server 2008/2012
- Windows 7 (64-bit)
- MS SQL Server 2005/2008/2012
- WEB-Browser with support for Silverlight
