Smarten up your home

See exactly how much energy you consume at home.

You have a washing machine, lights, a fridge, a freezer, an oven and so on, but do you know exactly how much they consume? The Smappee Energy doesn't just tell you; it shows you! It automatically recognises the most important appliances in your home and gives you a detailed visual overview in the app. So you can see at once how much standby power you use and which appliances are energy guzzlers. With a Smappee energy monitor in your home, you will be more energy aware and you could easily save up to 30% of your energy costs.

Easy to install yourself, simple to monitor on your smartphone.

You don't need to be a specialist to install the Smappee Energy. Just connect it to your fuse box, download the app and connect to your WiFi. You will immediately get a real-time overview of your energy consumption and within two days even individual information about each of your most essential appliances.

Get started straight away.

After installation, Smappee displays a real-time overview of your energy consumption. Explore your home: switch on an appliance and see the grey bubble grow. An alert will appear letting you know how much this appliance consumes. This is also a great way of naming the devices that Smappee detects.

A smarter home.

Transform your house into a smart home with the Smappee Energy and Smappee Comfort Plugs™. These smart plugs enable you to operate your most essential home appliances remotely. Want your coffee maker to start up when you wake up? Or the TV to turn itself off when you leave the house? Combine saving energy with greater comfort. Buy a Smappee energy monitor and get a Smappee Comfort Plug™ free! Of course, you can easily just order more whenever you want.

A technological miracle.

- Innovative and patented NILM technology (appliance recognition).
- Compatible with IoT platforms such as Amazon Echo, Qivicon, IFTTT, Conrad Connect, Stringify etc.
- Compatible with Smappee Gas & Water for a complete overview of your energy consumption.
- Open API.
- Discover your energy and costs each day, month and year.

Specifications.

- Dimensions: 16 cm (l) x 10 cm (w) x 3.5 cm (h)
- Weight: 300 grams
- WiFi 802.11 b/g/n 2.4 GHz
- Working temperature: 5°C to 40°C
- Storage temperature: -10°C to 60°C
- Relative humidity: 0-80%, 5°C to 40°C
- Protection class IP 20
- Working height: 0 to 2000 metres
- EMC: EN 55022 (class B)
- Safety requirements: EN61010-1 Ed 3.0 (2010-06), EN61010-2-032 Ed 3.0 (2012-09)
- Overvoltage category: 300 V/CAT II
- ~110-240 V, 50/60 Hz, max 5W
- Current clamp max 50A
- Both single and three-phase connections
