New ways of working, new storage needs

Our working lives have changed, and business environments will continue to change. With hybrid working the new norm, employees, contractors and visitors need space for hotdesking and collaboration. And, without a permanent desk, they need secure storage.

Which all means that lockers are becoming an essential, and valuable, investment for many companies.

AEOS Locker Management is the smart answer

Flexible
- Manage lockers for employees, visitors, contractors and more.
- Use lockers dynamically, rather than one per person, so you need fewer overall.
- Assign lockers to individuals or groups.
- Authorise use for a set period or without a time limit.
- Lock and unlock with any ID – badge, mobile, biometric or QR code.
- Use on one site or across many.

Intuitive
- AEOS dashboard – makes managing thousands of lockers easy.
- Modern info point – keeps things straightforward for users.
- Mobile app – lets you open and close lockers with your phone.

Intelligent
- Combine locker management with physical access control.
- Powerful reporting – track access and make data-driven decisions.
- Integrates with other systems – from HR databases to building management software.
- Secured against theft and cyberattacks.

Smart locker solutions for a variety of uses

Storage

AEOS Locker Management can secure an unlimited number and variety of lockers for personal and communal belongings, including filing cabinets, post boxes, medicine cabinets and more. The AEOS dashboard makes it easy to:

- Assign a locker to one specific person.
- Switch one or more lockers to flex mode, so any authorised person can use them.
- Authorise someone to use multiple lockers at the same time.

Asset management

AEOS Locker Management is an ideal way to manage assets like handheld scanners, medical equipment, construction tools, and much more. You can:

- Assign a group of lockers to supervisors, which they can manage via the info point.
- Use the AEOS dashboard to easily authorise who can loan which assets.
- Export loan and return data to reports and data visualisation platforms.

Drop off & pick up

AEOS Locker Management can be used when goods or devices need to be dropped off or picked up. It's often used, for example, by:

- IT departments – people can easily drop off a faulty laptop and collect it after repair.
- Hardware stores – installers can pick up materials after hours.
- Couriers – parcels can be left in a secure place, ready for collection later.

Cloakrooms

AEOS Locker Management allows total flexibility when assigning cloakroom lockers for employees, visitors or contractors. You can, for example:

- Assign specific lockers or allow people to choose which they use each time.
- Define when, or for how long, lockers can be used – or set no time limits.
- Assign how many lockers someone can use per location, building, city or country.

Operates seamlessly with AEOS access control

AEOS Locker Management is an integral part of the AEOS platform, which has been trusted by many well-known companies for more than 20 years. It means you can use one system to easily manage access to doors and lockers, which brings a range of benefits.

Synch access rights & collate data – all in one place

With AEOS, you can use the same range of functionalities for lockers as for doors. And create a smart building where, if you have building access, you can use a locker. You can automatically block someone's locker when you block their access rights. And you can collate all access data in one system, which gives powerful reporting capabilities.
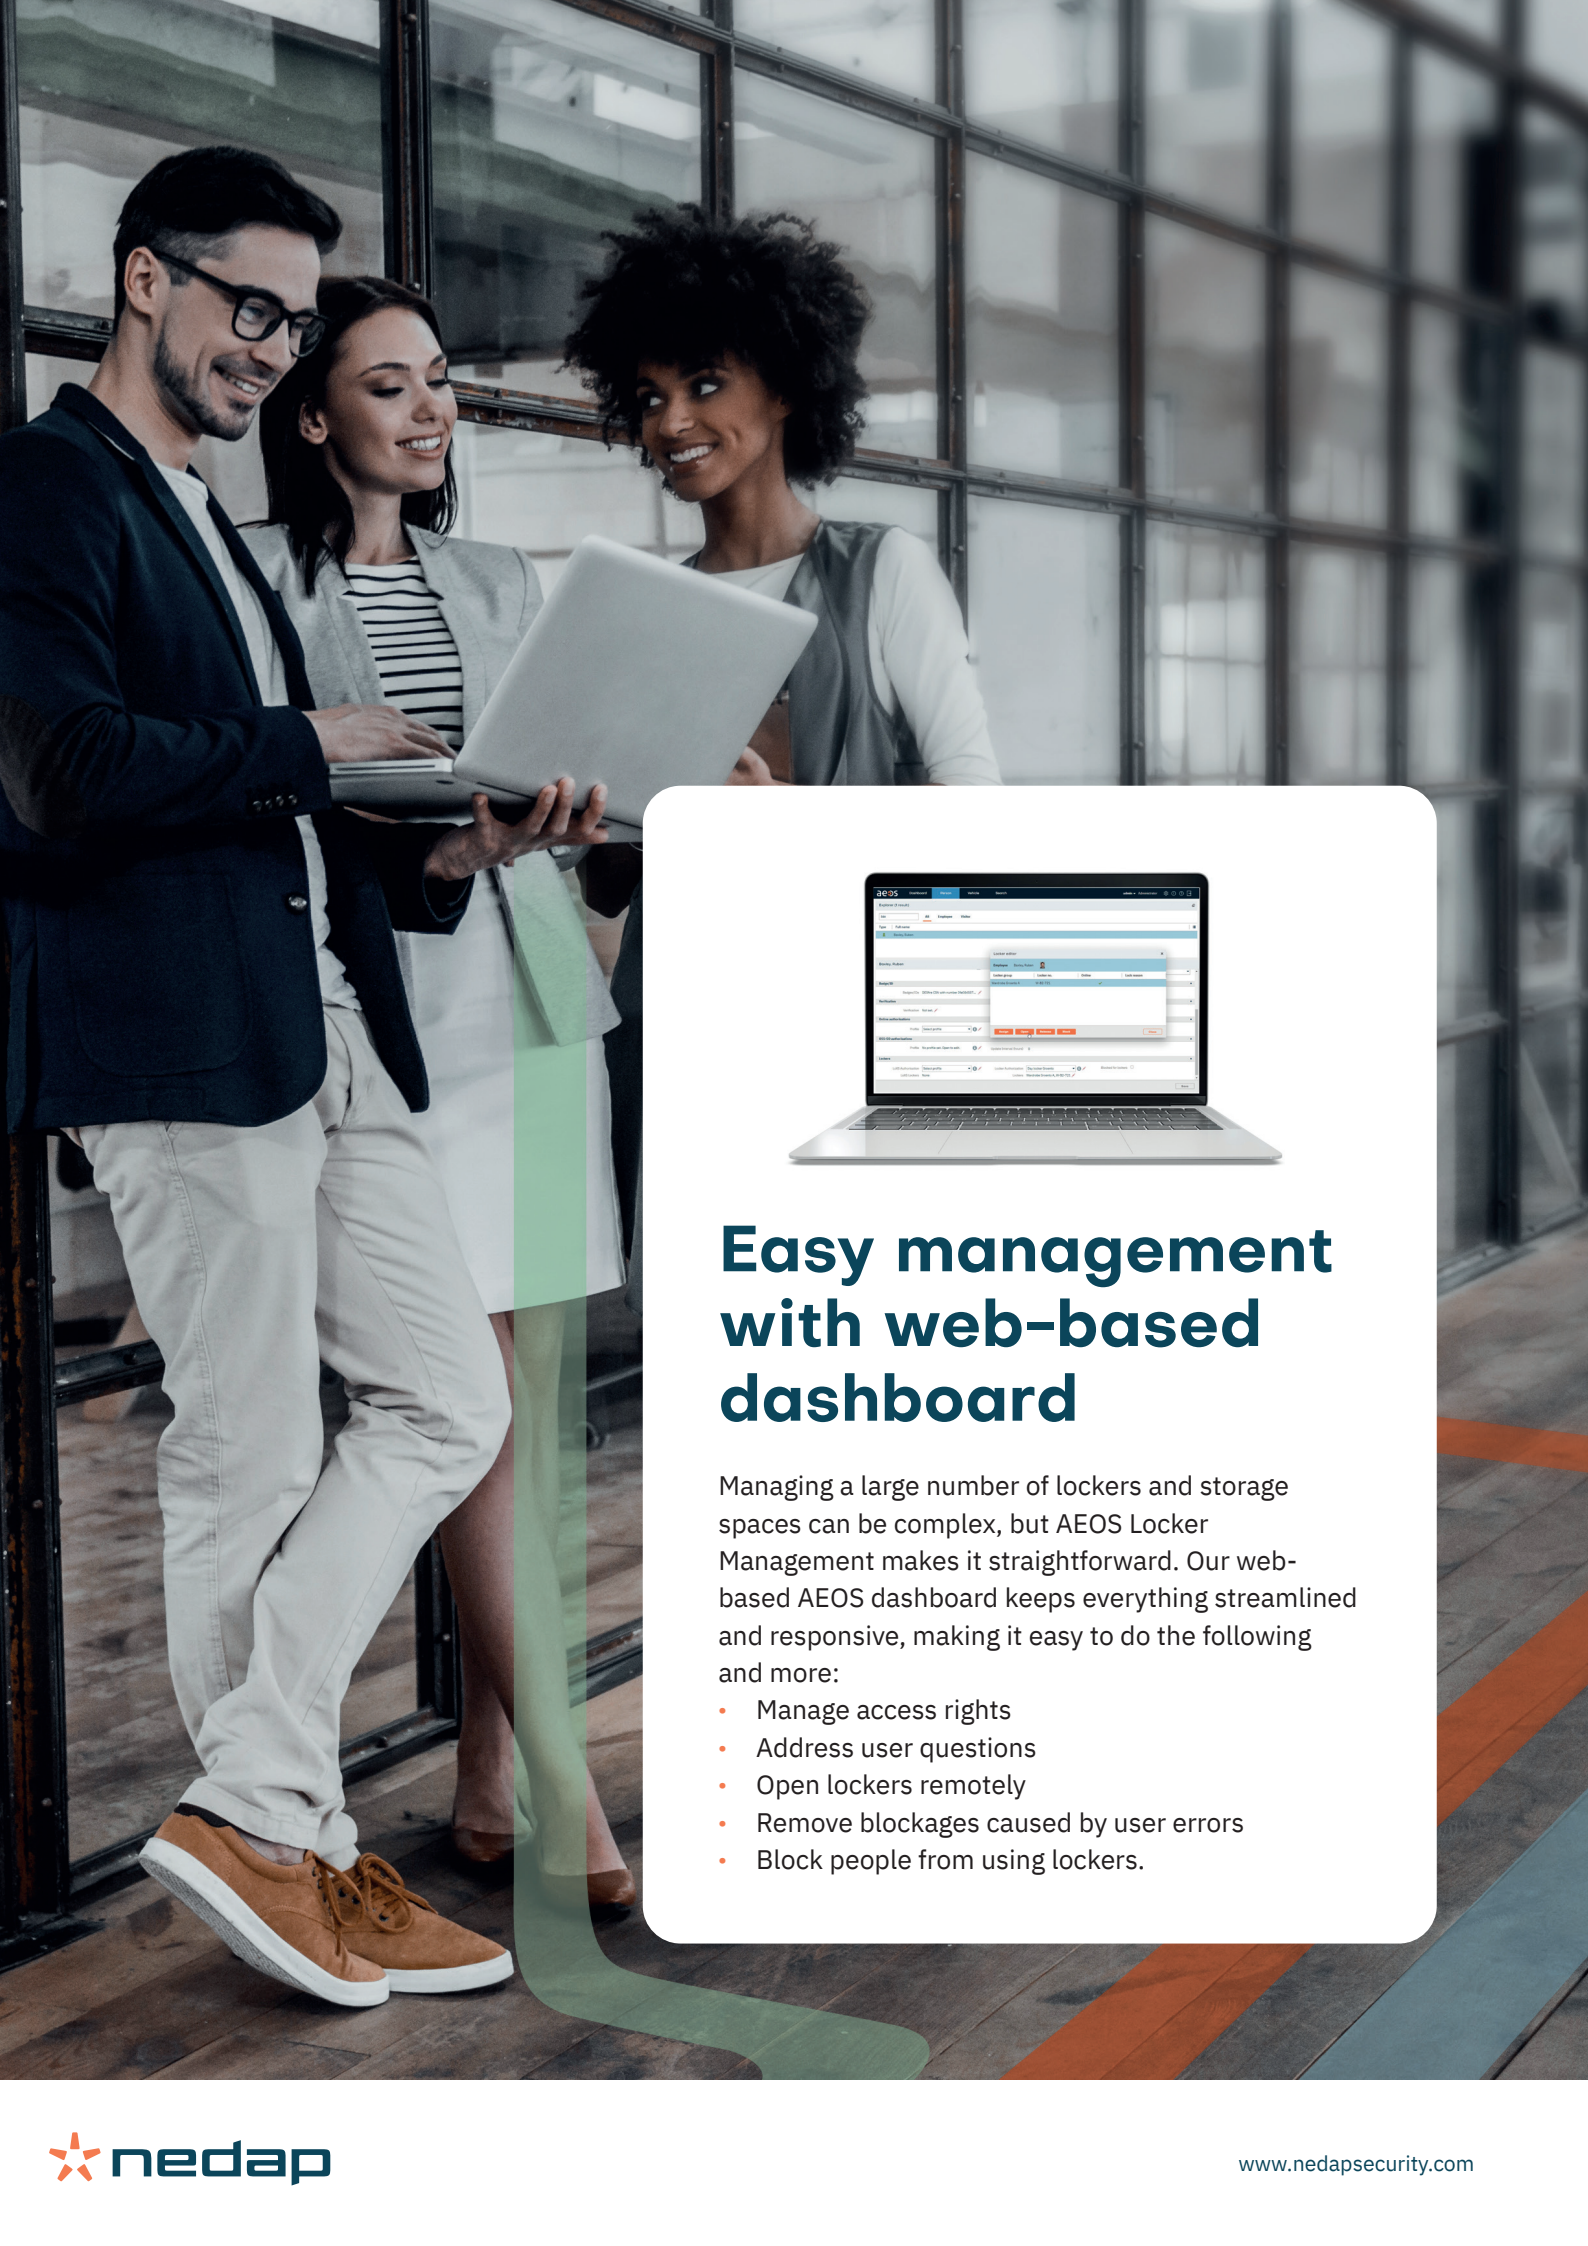

Streamlined integrations

AEOS integrates seamlessly with a wide variety of third-party systems such as those for HR, visitor management, reporting and building management. To enable these integrations, it supports SAML, LDAP and SOAP Webservices.

Energy saving functionality

If an alarm is set for the area where lockers are located, all doors in that area – including lockers – can be switched to disabled so they can't be opened. The controller switches off lockers by disconnecting the power, so energy isn't wasted when they're not accessible.

Easy management with web-based dashboard

Managing a large number of lockers and storage spaces can be complex, but AEOS Locker Management makes it straightforward. Our web-based AEOS dashboard keeps everything streamlined and responsive, making it easy to do the following and more:

- Manage access rights
- Address user questions
- Open lockers remotely
- Remove blockages caused by user errors
- Block people from using lockers.
